

# QUALITY AWARDS for PROJECTS 2013

In association with:  **ERNST & YOUNG**  
*Quality In Everything We Do*

## Testimonials from 2013 Awards Programme

6. The BARKA III IPP PROJECT was undertaken by a consortium of GS E & C (Korea) & SIEMENS (Germany) and is a combined cycle power plant with a design capacity of 750 MW. We at AHEC, working directly with GS E&C were responsible for the Civil and Building works. We are delighted to receive this prestigious Award as it further underlines our position and reputation as one of the Sultanate of Oman's leading local contractors in the delivery of quality construction solutions . In addition working on this project allowed us to continue and build on the business relationship that we have had over a number of years in working with both GS Engineering & Construction and Siemens. This close cooperation was a major contributing factor to our ability to win this great award. **Mr. Peter Hall, CEO, Al Hassan Engineering Company SAOG.**
